

The Royal, East Perth - Kitchen & Bar Floor Upgrade Hard wearing, food grade finish with chemical and anti slip resistance Seamless Polyurethane Resin Flooring

Antiskid at Work

Requirements:

Kitchen:

Antiskid Industries were challenged to complete the total upgrade with a time frame of starting first thing Monday morning and completion ready for commissioning by the following Thursday afternoon. The upgrade required the complete removal of all floor tiles and screed and a total decommissioning of kitchen equipment including plumbing and electrical works.

Bar:

Mechanically prepare the existing floor tiles, removing broken or loose tiles and repairing. Decommission bar including plumbing and electrical equipment in readiness for new flooring.

Solution:

Kitchen;

Antiskid recommended removing existing flooring and prepare for new epoxy based screed approximately 20mm to falls and existing drains. Supply and install epoxy based coving finished under existing wall tiles.

Followed by installing 6mm poly/resin flooring in a slip resistant finish and finally commission reinstatement of all equipment, plumbing and electrical works.

Bar:

Once the existing floor had been prepared Antiskid recommended a food grade protective flooring in a slip resistant finish to be installed over the existing tiles. Finally reinstate new aluminium floor coving on completion and recommission all bar equipment.

Work was completed and recommissioned within the time allowed ready for commercial action on the Friday.

Products used:

Flowcrete Flowfresh Polyurethane Flooring

Project details:

Date: July 2016

Location: Royal East Perth, Perth, Western Australia

Project Manager: Antiskid Industries

Product supplier: Flowcrete Australia

Contractor: Antiskid Industries
