

South Perth Commercial Development

Superior protective flooring produces dynamic, colourful and safe car parks.

Project Brief: The carpark in this commercial building was failing and cracked. Demarcation lines were unclear, and the surface was unsafe. The clients required a solution that revamped the car park to a standard to match this prestige building.

Solution: Antiskid Industries recommended installing Flowcrete Deckshield, a solvent-free protective coating ideally suited to high frequency traffic movements such as car parking environments. The Deckshield range offers an attractive hard wearing flexible polyurethane trafficable car park decking & pavement surfacing system with varying degrees of slip resistance for ramps. Deckshield can also be formulated with “super fast” curing options for rapid turn around projects.

Benefits

- Green label certified
- Aesthetically attractive

- Reduces noise - greatly reduced tyre-squeal
- Hard wearing – abrasion resistant
- Excellent chemical resistance to engine oil, battery acid, hydraulic fluids, fuel, etc.
- Fire resistant
- Resistant to hair line cracking
- Excellent bond strength
- Fast track installation
- 100% UV light stable – non yellowing
- Creates bright demarcation lines and signage and leaves a welcoming impression on users.
