

The Quadrant – End of Trip Cycle Lane

Slip Resistant Surfacing System. Low Maintenance

Rapid Install, Safety Pathway for Bicycle Traffic

Project Brief: Cyclists using the pathway at the Quadrant Building in Perth were experiencing serious safety issues with the path and there had been a serious incident. The existing pathway was creating a dangerous environment, particularly in wet weather. An urgent solution was required.

Solution: Antiskid Industries recommended installing the Omnigrip Deco Surfacing System to the existing shared pathway. Deco is not only economical and ensures optimum safety for users but is also aesthetically pleasing, and available in a range of colours.

It was also important for the client that this solution be implemented quickly. In the middle of winter there was only going to be more possibilities of slips and skids with the risk of further injuries to users. The team at Antiskid planned and executed the solution to ensure minimal disruption while

removing the existing surfacing. Then the areas were marked out and the striking blue surfacing applied followed by the UV Sealer to promote long design life and assist in maintaining the cleanliness of the installation. This solution is low maintenance and will continue to be a dynamic feature for many years to come with minimal maintenance.

And the entire project was accomplished over the course of 24 hours. All told, an outstanding solution.
