

## OMNIGRIP CST – High Definition Cycle Lanes Better safety factors and early visibility colours

Cycle lane safety surfacing

Antiskid at Work

### Highly visible demarcations

ANTISKID OMNIGRIP CST is a durable skid resistant coloured surfacing system suited for cycleways and areas requiring high visibility on public road systems. The key safety factor is that all road users have clear, early visual identification preparing them for changing road conditions ahead.

ANTISKID OMNIGRIP CST comprises of thermosetting resin compound incorporating specialist synthetic coloured aggregates to provide a high visibility coloured pavement, while maintaining high skid resistance to all sizes of vehicles.

As an economic alternative to coloured asphalt and thin build painted coatings, ANTISKID OMNIGRIP CST can be applied to existing pavement surfaces (new or old with the potential to install up to 1,000 metres in a single day).

### Rapid installation

Antiskid Industries has installed numerous demarcation projects for Main Roads and most Local Governments in Perth specifying Synthite. It's a durable proven solution incorporating specialist synthetic coloured aggregates ensuring long term

colour retention such as the work on the West Coast Highway, Beeliar Drive Cockburn and Great Eastern Highway cycle lanes.

It's quick to install, with 'drive-on' within 5 hours in most cases reducing disruption, noise and inconvenience and leaving a very professional long lasting finish. It's available in four distinct colours (with others available on request), plus it's environmentally friendly with 100% recycled synthetic aggregate and no odour.

- Visibly safer cycle lanes
- Extremely durable
- Whole of life colour retention (no fading with age)
- Improved surface friction
- Solvent free
- More than meets the required slip resistant standards
- Guaranteed installation
- Extensive reference lists

Product colours: Red | Blue | Yellow | Green
