

Print Hall Project, Perth WA Commercial Flooring Commercial Flooring Solutions

Antiskid at Work

Requirements:

A significant development was recently completed in Perth.

The Print Hall project is a multi-storey commercial food, wine and function precinct, incorporating a food court with numerous high quality international cuisines.

The site is the heritage listed 1930s Newspaper House building, formerly the home of the West Australian newspaper.

Within the build there was a series of small, medium and large commercial kitchens designed to cater for all the food related activities within the precinct. Demand on commercial kitchens such as these is immense and accordingly the floors take the brunt of the load. They have to be resistant to long term impact from dropping and cleaning utensils, abrasion from constant traffic, food acids, cooking oils and thermal shock.

Solution:

Leeda Developments, the company constructing and project managing the entire internal fit out selected to install Sikafloor 22N PurCem product system.

It is a polyurethane/cement based floor that has proven over many years to be the ultimate answer for Commercial and Industrial food facilities.

Not only does it cope with the rigors of the environments mentioned above, it is seamless, fast to install and VOC compliant for food grade requirements.

Antiskid Industries has vast experience in installing this type of system.

The result is a series of floors within the building that can be relied upon to provide long term performance in a demanding environment.

Product used:

Sikafloor 22N PurCem

Project details:

Date: September 2012

Location: Print Hall, Perth WA

Construction & Project Manager: Leeda Developments

Product supplier: Sika Australia Pty Ltd
