

## Shared Access Demarcation Projects Better safety factors and early visibility colours to help protect Road, Pavement and Carpark safety surfacing

Antiskid at Work

### Requirements:

Perth, being Australia's fastest growing city is experiencing greater traffic congestion, is becoming more and more of a problem, accelerating the need to install coloured demarcation areas in certain locations for safer shared access. This safer shared access extends to cycle, pedestrian, and other surfacing areas in the form of anti-slip, anti-skid and high level colour retention.

In some cases, just coloured asphalt for bus and cycle-lanes is being specified because of a perceived cost saving. In most cases it has a dull appearance with little colour delineation between the black and red medium strips as it ages, it's also costly to install as there is a need to plane out the road so that new asphalt can be laid, taking up to 4- 5 days to complete. It's noisy, messy and disruptive to local residents and traffic users alike.

### Solution:

Specify Antiskid Omnigrip CST for all your demarcation projects, because it has proven road safety technology with whole of life values and better safety factors, plus with early visibility colours that help protect and assist all shared access users.

Areas that benefit from installing skid resistant, coloured surfacing delineation include:

- Bus and cycle lanes;
- Transit and fire lanes;

- Pedestrian and school crossings;
- School and speed zone identification;
- Roundabouts;
- Specialist parking delineation;
- Traffic medium dividers;
- Pedestrian refuge islands;
- Bus stops; and
- Railway crossing;

Antiskid Industries has installed numerous demarcation projects for Main Roads and most Local Governments in Perth specifying Synthite. It's a durable surfacing solution incorporating specialist synthetic coloured aggregates ensuring long term colour retention.

It's quick to install, in and out in one day, reducing disruption, noise and mess and leaving a very professional finish.

### Product used:

Synthite coloured aggregate

### Project details:

Clients: Main Roads, Local Governments, Civil Road construction companies, Road Design consultants and Architects.

Product supplier: Flowcrete Australia

Contractor: Antiskid Industries
