

Perth Metropolitan TAFE Workshops

Superior Protective Flooring with Safety Demarcation
Slip Resistant Surfacing System, Low Maintenance

Project Brief: The student workshops at this important TAFE College had outdated, slippery and unsafe flooring and required refurbishment. The existing flooring was starting to create an unsafe environment. The floors were also putting excessive stress on cleaning operations and requiring excessive maintenance.

Antiskid were brought in to advise and assist with recommendations for a specification for the flooring rectification and associated works.

Solution: Antiskid Industries recommended installing a high build epoxy coating which is a solvent-free protective coating, ideally suited to hard wearing environments. The product range is self smoothing, attractive & hard wearing with good chemical & mechanical resistance. It is solvent free making for application without disturbing solvent odours.

The team at Antiskid worked closely with the staff to ensure a minimum of disruption and noise

mitigation to the ongoing smooth operation of the campus. The result is a world class system with long design life, high impact resistance and is low maintenance.

And the product creates bright demarcation lines and signage and leaves a welcoming impression on all users.

All told, an outstanding solution achieved within project timeframe and budget.

Project Details

Date: July, 2020

Location: Metropolitan TAFE, Perth

Project Manager: Programmed Maintenance

System Designer: Antiskid Industries

Product Supplier: Sika Australia

Contractor: Antiskid Industries
