

Mooka – Ore-Car Repair Shop Colourful Demarcated Pedestrian Walkways

Project Brief: The new Mooka state-of-the-art ore-car repair shop, office and warehouse building required epoxy resin high build coating to withstand extreme heavy duty from the 10 tonne AGV (Automated Guiding Vehicles) traffic. A degree of slip resistance and colourful, clearly marked demarcation walkways, line marking and service demarcation areas requirement was significant and important because of the crosswalks where pedestrians versus the automatic guiding vehicles traffic is clearly marked and identified.

Solution:

Antiskid is an expert in installing epoxy resin high build coatings for heavy duty industrial flooring having been commissioned to install similar for many industry sectors in Western Australia. Antiskid, in consultation with McConnell Dowell, specified 2 coats of coloured epoxy roll coat and a mild slip resistant finish to the final coat to ensure a standard of R10 slip resistance.

Colourful demarcation areas were specified for walkways and service demarcation areas in addition to various safety and fire fighting equipment areas. Antiskid Industries completed the work with minimal disruption, on-time and to budget.

Products Used:

Sikafloor 264 Coloured Epoxy Roll Coat

Project Details

Date: February 2016

Location: Mooka

Contractor: McDonnell Dowell

Product Supplier: Sika

Contractor: Antiskid Industries
