

## Brockman 1 MEM Workshop

Demarcated Pedestrian Walkways & Workshop  
Superior Protective Safety Flooring

### Project Brief:

The new Brockman 1 state-of-the-art MEM Workshop, office and warehouse building required epoxy resin high build coating to withstand extreme heavy duty traffic. A degree of slip resistance and colourful, clearly marked demarcation walkways, line marking and service demarcation areas requirement was significant and important.

### Solution:

Antiskid are the local experts in installing epoxy resin high build coatings for heavy duty industrial flooring and have been commissioned to install similar flooring for many industry sectors in Western Australia.

Antiskid, in consultation with Georgiou Group, specified 2 coats of coloured epoxy roll coat and a mild slip resistant finish to the final coat to ensure an appropriate level of slip resistance.

Colourful demarcation areas were specified for walkways and service demarcation areas in addition to various safety and fire fighting equipment areas.

Antiskid Industries completed the work with minimal disruption, on-time and to budget.

### Products Used:

Sikafloor 264 Coloured Epoxy Roll Coat

### Project Details

**Date:** Sept 2020 – Feb 2021

**Location:** Brockman 1 Mine, Mt Sheila, WA

**Contractor:** Georgiou Group

**Client:** Rio Tinto

**Product Supplier:** Sika Australia

**Contractor:** Antiskid Industries
